Hi NY Team,

This is a webinar put on by one of our colleagues, Green Science Policy Institute. This may be of interest to you and a good place to ask questions!

All the best,

Judy

Highly Fluorinated Chemicals: A Sticky Issue

Sponsored by Green Science Policy Institute

Wednesday, April 19, 2017 at 11:00 AM Pacific / 2:00 PM Eastern

Learn about highly fluorinated stain and water repellant chemicals in this one-hour webinar: the products and materials in which they are used, why they can be harmful, and what can be done about it. Leaders in the field will share their expertise on this persistent and potentially toxic class of chemicals. These engaging talks were presented at [February 2017](#) Green Science Policy meetings. Register [here](#).

Speakers include:

- Mark Strynar, Ph.D. scientist at the U.S. Environmental Protection Agency, an expert on highly fluorinated chemicals, will share emerging science on their health and environmental impacts.
- Christopher Higgins, Ph.D., from the Colorado School of Mines, will share his studies on migration of highly fluorinated chemicals from contaminated soils into food crops like cucumbers and strawberries.
- Robert Bilott, Attorney at Law, will discuss his 18-year-long effort to bring justice to those harmed by PFOA in the Ohio River Valley that resulted in a recent \$671 million legal settlement with Du Pont.
- Arlene Blum, Ph.D., of the Green Science Policy Institute, will share updates about these chemicals in drinking water, food packaging, and consumer products, and the efforts of companies that have stopped using them.

We hope you can join us on April 19, 2017 at 11am pacific. We have also created a Facebook [event](#) for the webinar -- please feel free to share with your network.

Best wishes,
Tom
